

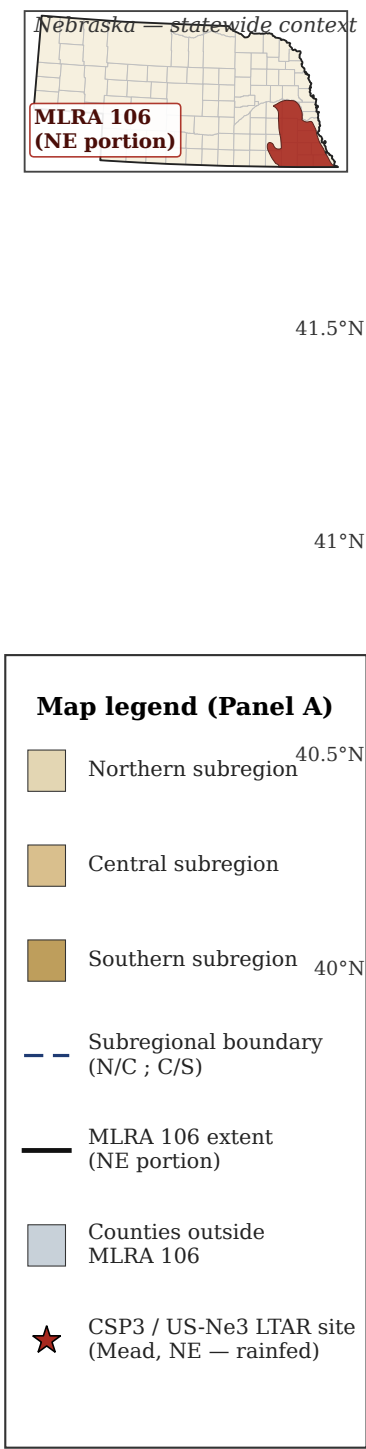

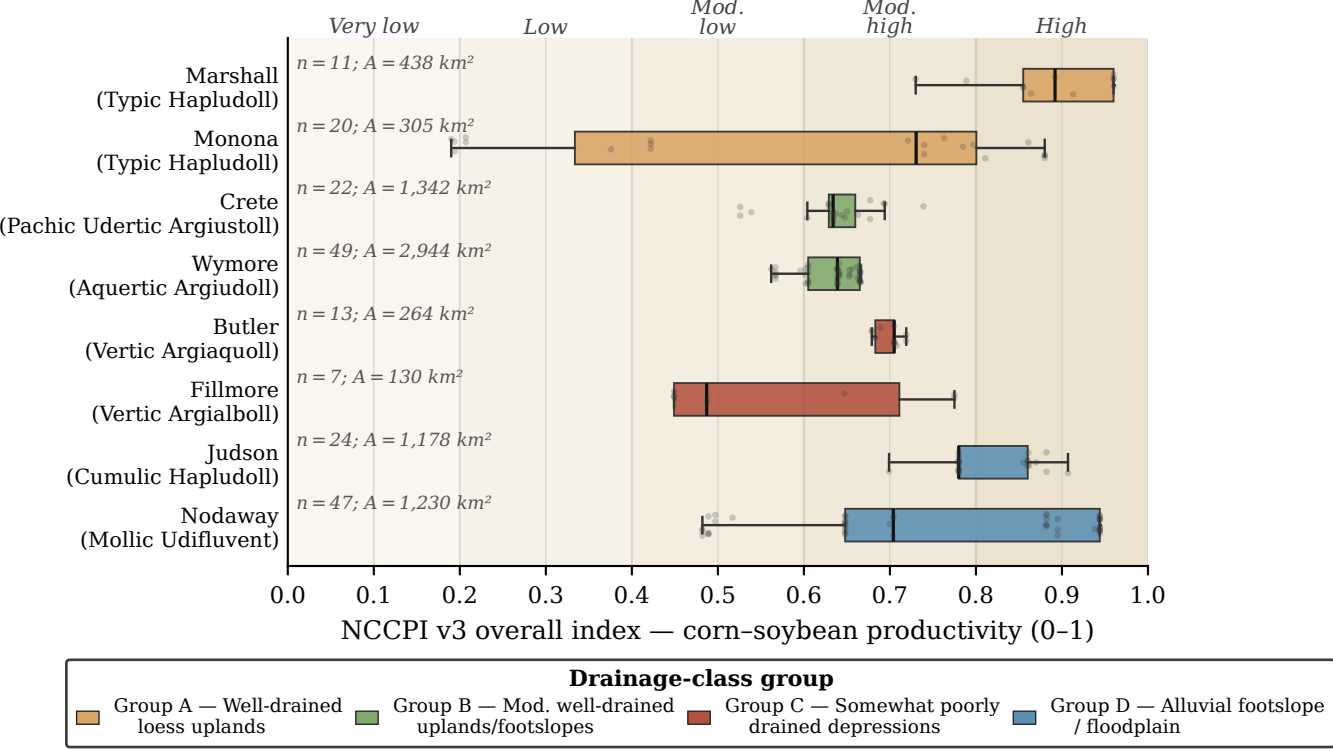

Figure 1. Major Land Resource Area (MLRA) 106 — Nebraska Portion

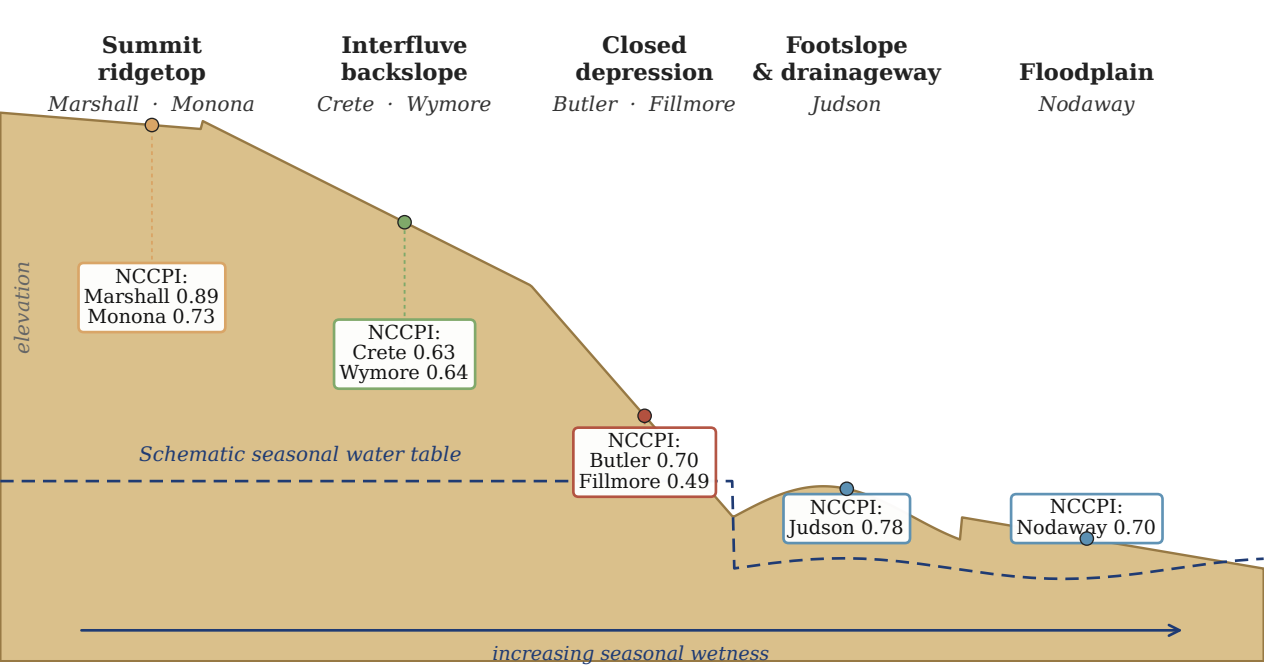

Geographic reference and empirical soil productivity for the rainfed maize–soybean domain.

B. Empirical NCCPI v3 — dominant MLRA 106 series

C. Schematic toposequence — MLRA 106 loess-mantled till plain

Data sources — Panel A: NRCS MLRA v5.2 (2022) and U.S. Census TIGER/Line 2023. Panels B–C: USDA–NRCS Soil Data Access (April 2026); major-component interpretations restricted to the 13 MLRA 106 constituent-county SSAs (Saunders, Cass, Lancaster, Otoe, Johnson, Nemaha, Richardson, Pawnee, Gage, Jefferson, Saline, Seward, Butler). Projection: NAD83 / Conus Albers Equal Area (EPSG 5070). Landscape-position assignments after Lewis, Pollard & Rhoades (1967) and USDA–NRCS (2022); box-plot medians denote the empirical median NCCPI v3 overall value across all major components.
